

# KINDER MORGAN PIPELINE

ALL OF THE RISK  
NONE OF THE BENEFITS

## BATH COUNTY, KENTUCKY

### WHAT IS IT?

Kinder Morgan Energy Partners and MarkWest, two large energy/pipeline companies, have a plan to re-purpose the Tennessee Gas Pipeline from its current use for natural gas to carry natural gas liquids (NGLs), a byproduct of natural gas extraction. The pipe would carry the NGLs from Ohio to the Gulf Coast for processing and export.

### WHY DOES IT MATTER?

This 70 year old pipe would be repurposed to carry a product that is much more explosive and hazardous than natural gas.

### DOES IT AFFECT ME?

The Tennessee Gas Pipeline currently runs from Ohio into Northeast Kentucky, following a route close to Morehead, Richmond, Danville, Campbellsville and Glasgow before entering Tennessee on its way to Louisiana. Eighteen Kentucky counties would be affected by the newly proposed pipeline. When fully operational it could carry nearly 17 million gallons of NGLs per day across 256.4 miles of Kentucky.

### NATURAL GAS VS. NATURAL GAS LIQUIDS

#### NATURAL GAS

- Main component: Methane
- Used for heating homes & cooking
- Remains as a gas under pressure
- Lighter than air & will generally rise & dissipate

#### NATURAL GAS LIQUIDS

- Main component: Ethane, propane & butane, and liquids pentane, hexane & heptane
- Used to make plastic
- Heavy, will seek low areas like valleys & creeks
- Can spread along ground to sources of ignition

### WARNING

NGL fires release far more **toxic chemicals** than natural gas fires

Technology that was used to weld the pipeline is now considered **substandard and not safe**

NGLs are more than a **hundred times more explosive** than natural gas

NGLs are heavier than air creating asphyxiation and water **contamination hazards**

## THE AGING PIPELINE IS NOT IN GOOD SHAPE.

### THE DANGER

In 2004, a 4 inch natural gas liquids pipeline running through Floyd County, Kentucky exploded, destroying five homes and sending nine people to the hospital. Andrew McNeil, former Executive Director of Kentucky Oil and Gas Association and current senior advisor to Governor Matt Bevin said he did not consider the event "catastrophic". McNeil dismissed the explosion by saying "the pipeline was about 50 years old" and not build to current day standards.

The proposed Kinder Morgan pipeline is 24 inches in diameter and approximately 70 years old.

# BATH COUNTY NEIGHBORHOODS AT RISK

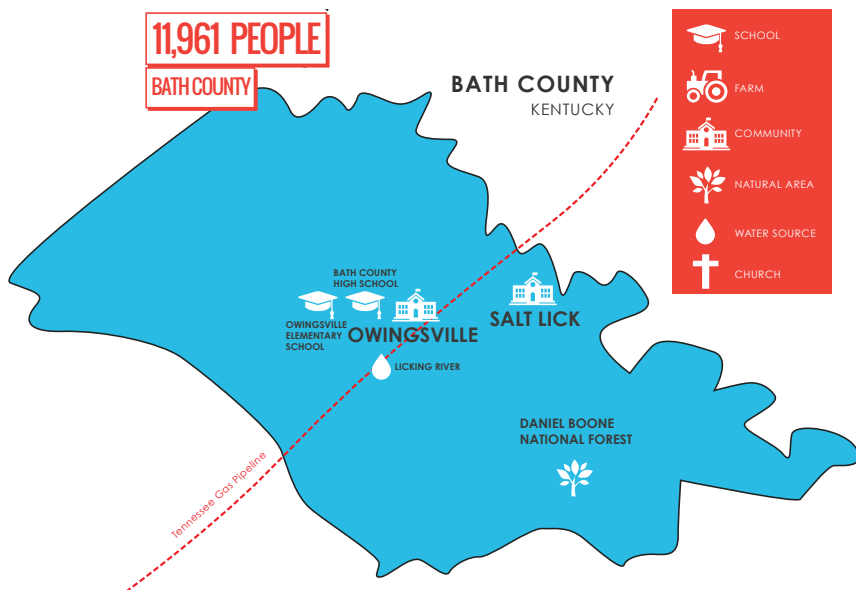

- Olympia State Forest
- Mill Creek Rd
- Olympia Springs Rd
- Hwy 36 near Olympia
- Mud Lick Rd
- Elk Lick Rd
- McCarty Branch Rd
- Hwy 60 near Salt Lick

# WATERWAYS AT RISK

- Olympia State Forest
- Mill Creek
- Pond Lick
- Slate Lick Branch
- Licking River

# WHAT CAN YOU DO?

For property owners where the Tennessee Pipeline crosses your property:

Check your lease. Some leases may require gas companies to negotiate a new lease for a change in the product flowing through the pipe.

Determine if the gas company used eminent domain in the original easement. If so the type of materials that can flow through the pipeline may be restricted.

Seek legal advice from your attorney or the Kentucky Resources Council at:  
 FitzKRC@yahoo.com or  
 (502) 875-2428
